

Product: Ledway Road

Project data: The first city to embrace LED technology on a large scale, Anchorage will replace 16,000 streetlights -roughly one-quarter of their 150-watt HPS streetlights – with Ledway Road luminaires. The installation will roll out in several phases throughout the winter and spring. 16,000 Type PR optics Ledway Road will be installed. Some areas of the City will use 30 LED Ledway Road and others will use 40 LED fixtures.

Benefits: By retrofitting Ledway Road luminaires, the City of Anchorage will reduce energy costs by 50 percent, saving citizens approximately \$360,000 per year. Ledway Road fixtures have a life rating of more than seven times that of traditional high pressure sodium (HPS) lamps significantly reducing costs and allowing the City to better utilize maintenance resources. Visibility for vehicular and pedestrian traffic is dramatically improved through the use of NanoOptic™ refractors that layer light into the desired target zone for superior uniformity and control.

## LEDWAY – UNCOMPROMISING BRILLIANCE
